

Lake Ice Phenology of Southwest Alaska

Michael Verrier and Peter Kirchner
Southwest Alaska Inventory and Monitoring
Network, National Park Service

Page Spencer, Chuck Lindsay, Tim Shepard, Beth Hill, Sam Stark,
Amy Miller

Outline

- Rationale
- Methods
 - MODIS imagery
 - Image classification
 - In-situ observations
- Results
- Conclusions

*Freshwater seals hauled out
on Lake Iliamna*

Wolves crossing lake ice

Salmon are a
“keystone” species
in the aquatic and
terrestrial
ecosystems of the
region.

Alaskan communities depend on lake ice for transportation, subsistence and recreation.

Lake Ice Phenology

Manual Grid Analysis

1 km² grid masked to lake margin:

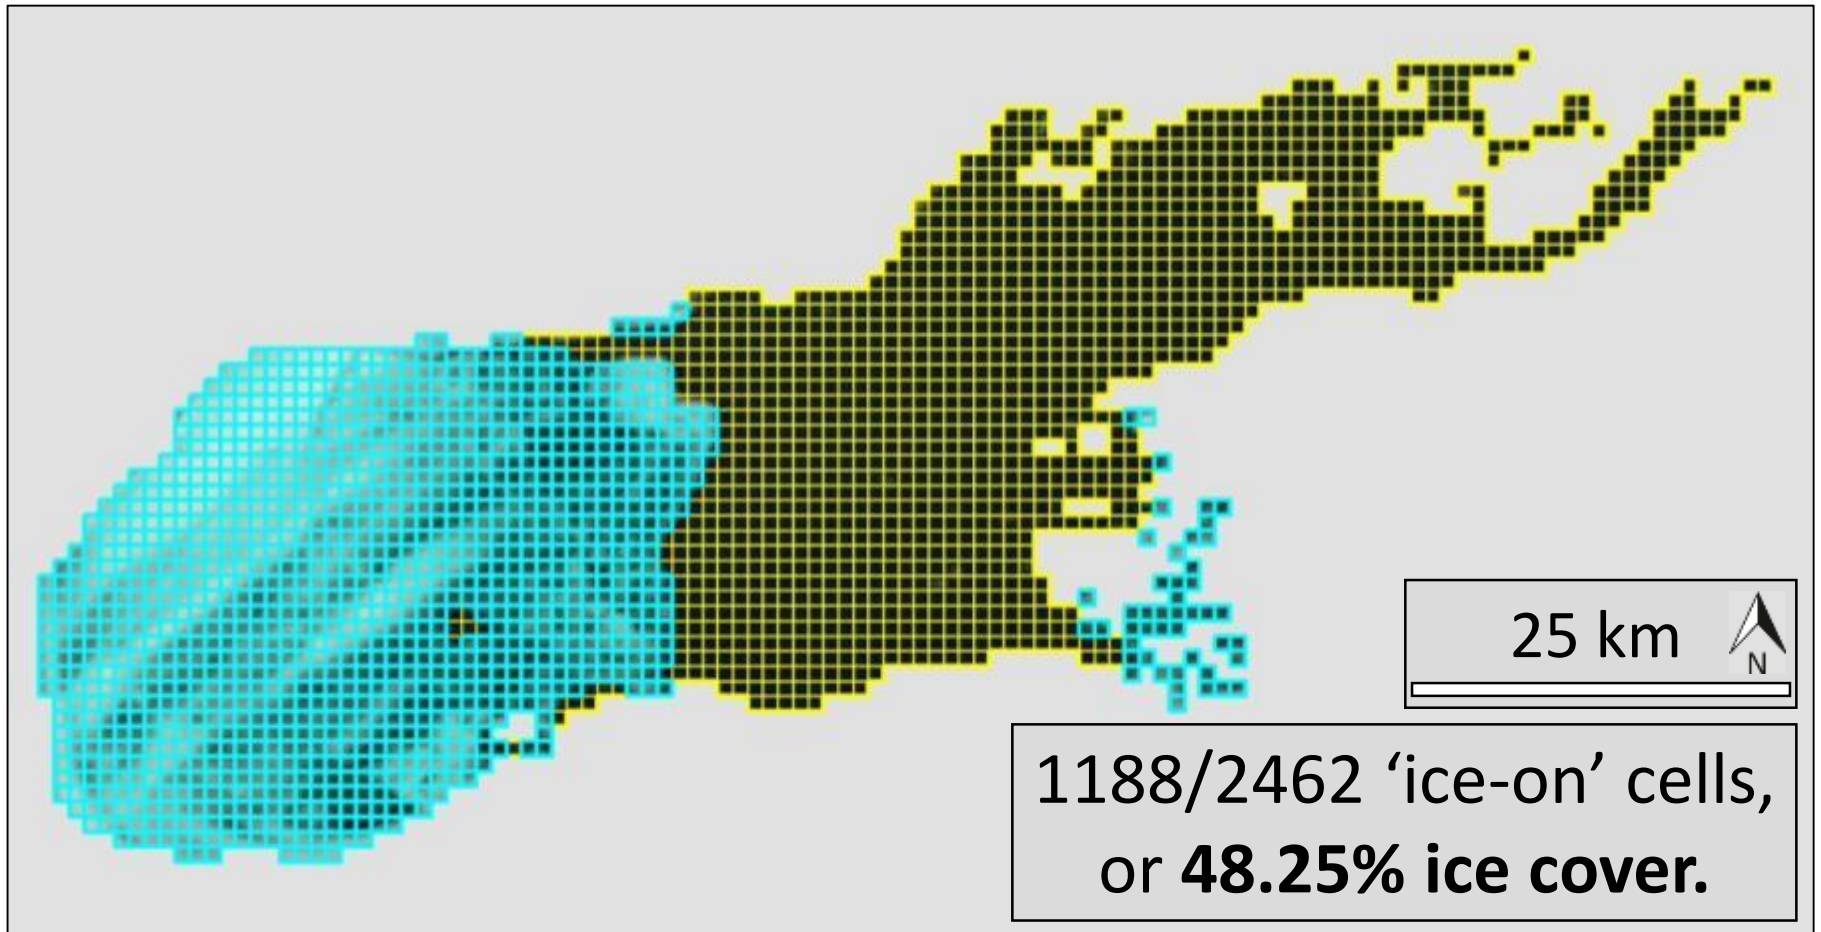

Lake Iliamna, February 25, 2015

Manual Grid Analysis

Selecting cells with >50% ice:

Lake Iliamna, February 25, 2015

Lake Becharof ice phenology during water year 2011:

October 11, 2010, 0% ice

December 23, 2010, 14% ice

February 15, 2011, 92% ice

% Ice

Metric

$\geq 10\%$

Start freeze-up

$> 90\%$

Complete Freeze-Over (CFO)

$\leq 90\%$

Start break-up

$< 10\%$

Water Clear of Ice (WCI)

Becharof Lake Percent Ice – Water Year 2011

Percent ice
from 0-100%
(0-1)

Poor Visibility and Uncertainty

Threshold Midpoint =

Median of 2 closest clear days

\pm amount of clouded days between

Example:

Day 90: ~25%

Day 91-93: clouded

Day 94: 100%

Reported CFO date = day 92 \pm 3 days

Ice Phenology Summary 2002-2016

- CFO ranges from late-Oct to mid-March (158 day variability)
- WCI ranges from early-Jan to late-June (174 day variability)
- Break-up more rapid (18.1 days ave.) than freeze-up (24.1 days ave.)
- Average duration of freeze (>90% ice): 115 days
 - Shortest years: 2003, 2015, and 2016, 55-67 days
 - Longest years: 2009 and 2012, 146 days each

Average Days Frozen & Amount of Lakes Failing to Meet 10% and 90% Ice Metrics

Multivariate ENSO Index (MEI) and Average Ice Duration Per Year

Pacific Decadal Oscillation (PDO) Index and Average Ice Duration Per Year

Outline

- Rationale
- Methods
 - MODIS imagery
 - Image classification
 - In-situ observations
- Results
- **Conclusions**

Conclusions

- 15 year lake ice phenology available, publication 2016-2017
- Continued use in Bristol Bay and Cook Inlet fisheries, limnology, and hydrology research

Future Work

- Obtain earlier time series using radar satellite observations
- Identify the next high temporal resolution satellite platform
